INDIA RUNS 2026

AI Recruiter Agent Swarm

Autonomous multi-agent hiring for the next India

peter14l

India Runs — Redrob AI

THE PROBLEM

India's hiring is broken at scale

500+

Applications per role

95% irrelevant —
recruiters drown in noise**60%**

Time spent screening

Not interviewing. Not
hiring. Just filtering.**Hidden**

Non-obvious talent

Tier 2/3, non-IIT, non-
English candidates get
missed**Current AI tools are black boxes**

They reject without explanation. No transparency, no trust, no feedback loop. Keyword filters miss transferable skills entirely.

India's recruitment market: \$2B+ and growing 15% YoY — core tech hasn't changed in a decade.

WHY NOW

Three forces make this possible today

AI Maturity

LLMs reason, plan, and use tools. Multi-agent frameworks are production-ready (CrewAI, AutoGen). Voice AI in Indian languages works (Sarvam, Bhashini).

India's Talent Boom

1.5M+ engineers graduate annually. Tier 2/3 cities produce world-class talent. Remote work demands location-agnostic hiring.

Redrob's Mission

Building India's AI OS for work. AI-native hiring is the foundational layer. Built for India, in India — not a Silicon Valley port.

This combination of AI maturity, market need, and platform timing has never existed before.

THE SOLUTION

Enter the Agent Swarm

5 specialized AI agents + 1 Orchestrator. From JD to shortlist in under 10 minutes.

AGENT	ROLE	RESPONSIBILITY
Orchestrator	Brain	Routes tasks, manages pipeline state, decides when to escalate to humans
Sourcer	Scout	Searches LinkedIn, GitHub, Naukri, internal databases autonomously
Matcher	Judge	Semantic ranking, transferable skill detection, explainable scoring
Screener	Interviewer	Voice calls in Hinglish, dynamic questioning, sentiment analysis
Scheduler	Coordinator	Calendar sync, slot negotiation, reminders, feedback collection

Every decision explained. Every candidate gets a fair shot. No black boxes.

HOW IT WORKS

From JD to shortlist in under 10 minutes

- 1 JD Submitted**
Recruiter pastes job description.
Orchestrator parses and activates the swarm.
- 2 Multi-Source Sourcing**
Sourcer Agent searches 4+ sources simultaneously — LinkedIn, GitHub, Naukri, internal DB.
- 3 Semantic Matching**
Matcher Agent scores candidates across 5 dimensions with full transparency.
- 4 Voice Screening**
Screener Agent conducts natural voice calls in Hinglish — adaptive, contextual, fair.
- 5 Auto-Scheduling**
Scheduler Agent books interviews in one click. No email tennis required.
- 6 Human Review**
Recruiter reviews top candidates with full scoring breakdown and call transcripts.

All 6 steps complete in under 10 minutes for a typical role

ARCHITECTURE

Clean, scalable multi-agent design

Framework CrewAI	LLM Gemini 1.5 Pro
Voice Sarvam AI	Vector DB Qdrant
Embeddings BGE-M3	Backend FastAPI

Each agent is independently deployable. Async messaging via Redis pub/sub. horizontal scaling on every layer.

KEY DIFFERENTIATOR

Voice screening that speaks **India's** language

Traditional screening

- X Text-only, English-only, rigid Q&A
- X Filters out great candidates who lack English fluency
- X Misses communication nuance, confidence, personality
- X Feels robotic and impersonal

Our Screener Agent

- ✓ Natural conversation in Hinglish, Hindi, English
- ✓ Dynamic questioning that adapts to responses
- ✓ Evaluates communication, confidence, cultural fit
- ✓ Removes English fluency bias from early filtering

80%

of Indians prefer native language

+34%

accuracy with voice vs text-only

2×

candidate pool from language inclusion

IMPACT

What this means for a hiring team

Time to shortlist	5-7 days	→	10 minutes
Recruiter screening time	60% of day	→	10% of day
Candidates evaluated per role	50-100	→	500+
Candidate experience	Generic, English-only	→	Personalized, multilingual
Decision transparency	Black box	→	Full reasoning per candidate

~70% reduction in cost-per-hire
for mid-to-senior roles

MARKET OPPORTUNITY

Built for Redrob, relevant for **everyone**

Redrob Integration

Native AI hiring layer for India's AI OS. Directly aligns with Redrob's mission as India's AI super app for work.

Enterprise SaaS

Standalone product for Indian companies (200-5000 employees). Plugs into existing ATS systems.

API-First

Embeddable agent swarm for any ATS. White-label options for recruitment agencies and platforms.

\$2B+

India recruitment software TAM by 2027

500

Mid-size Indian companies — initial target

ROADMAP

Beyond the hackathon

Q3 2026**PoC**

Core swarm with synthetic data.
Orchestrator +
Matcher + mock sources.

Q4 2026**MVP**

Live with 5 beta customers.
LinkedIn source,
3 agents, basic orchestration.

Q1 2027**Growth**

4+ sources, all 5 agents, Hinglish voice screening, production deployment.

Q2 2027**Scale**

Multi-lingual voice, learning loop, enterprise features, API marketplace.

ABOUT ME

Builder, not just a presenter

PB**Class 12 graduate · Proficient with AI tools**

I just experienced the hiring process as a candidate. I know firsthand how broken it feels on the other side. This isn't theoretical — it's personal.

Building for India — where I live, study, and will work.

"I'm not here to pitch. I'm here to build what next India runs on."

Thank You
